1. Executive Summary

ShellSense is a lightweight, AI-powered, keyboard-first command palette for Windows that radically reduces the friction of everyday computing tasks. Inspired by macOS tools like Spotlight and Raycast, ShellSense brings a premium, frosted-glass interface to Windows users who deserve the same effortless productivity experience.

By combining an on-device ML brain, natural language processing, real-time cloud sync, and an encrypted personal vault, ShellSense is not just a launcher -- it is an **intelligent personal command centre** that learns your environment, understands your intent, and executes instantly.

Attribute	Value
Platform	Windows (10, 11)
Current Version	v1.3.0
Primary Language	Python
Interface	PyQt6 (Desktop) + FastAPI (Web Dashboard)
AI Model	Custom-trained scikit-learn pipeline (shellsense_v3.pkl)
Cloud	Firebase Firestore
AI Integration	Groq API (Qwen3 LLM)
License	MIT
Repository	https://github.com/VRK1106/ShellSense
Live Demo	https://shellsense.onrender.com

2. Problem Statement

The Modern Windows Productivity Gap

The average knowledge worker interrupts their primary task **23 times per hour** for trivial micro-tasks. These interruptions accumulate into hours of lost deep-work time every week. Windows, despite being the world's most widely used desktop operating system (with over **1.6 billion active users**), lacks a native, intelligent command launcher comparable to macOS Spotlight or Raycast.

Specific Pain Points

[#] Calculations & Conversions

A developer needs to calculate 15% of 80, or convert 10 miles to km. They must open a calculator app, or worse, open a browser tab, load a webpage, di

Timezone Translation

A remote worker receives a meeting invite for 10:30 AM EST. They must mentally calculate the IST equivalent or open a world clock app. With global team

[folder] File Discovery

After downloading a PDF or file, the user must open File Explorer, navigate to Downloads, sort by date, and then find the file. In a distraction-heavy enviro

[scissors] Repetitive Text & Data Entry

A professional repeatedly types their email, phone number, office address, or GitHub link across forms and emails. There is no native Windows mechanis

? Timers & Reminders Without Phone Distraction

Setting a timer on a smartphone introduces the biggest threat to focus: the notification feed. Windows Task Scheduler is too complex for quick timers. Sti

Slow Startup & SSD Bloat

Windows boot times degrade silently as background apps accumulate in the startup registry. Most users have no visibility or easy way to audit and disabl

[keyed lock] Password & Credential Sprawl

Professionals maintain dozens of passwords, keys, and credentials. Copy-pasting them from browser-saved passwords or note apps is insecure, slow, ar

3. Solution Overview

ShellSense addresses every one of the above pain points through a single, always-accessible interface -- summoned in under 100ms by a global hotkey **Ctrl + Shift + Space**.

```

+-----+
| Press Ctrl+Shift+Space from anywhere on Windows |
| +-----+ |
| | [search] Type anything here... | |
| +-----+ |
| | |
| -> 15% of 80 -> Result: 12 |
| -> 100 USD to INR -> Result: 8350.00 INR |
| -> copy my email -> Copied: vrk@gmail.com |
| -> open last download -> Opened: report_final.pdf |
| -> timer 5 min drink water -> Timer Set [OK] |
| -> second email password -> [lock] Enter Master Password... |
+-----+

```

Core Promise: Every one of these tasks completes in under 3 keystrokes. No mouse. No browser. No context switch.

4. Unique Selling Points (USPs)

1. On-Device AI Brain (No API Cost for Core Logic)

Unlike tools that depend entirely on paid external AI APIs for every query, ShellSense uses a locally-trained scikit-learn ML pipeline for intent classification. The core intelligence runs entirely offline, making it **fast, private, and zero-latency**.

2. [lock] Zero-Knowledge Encrypted Credential Vault

No other Windows launcher offers built-in, end-to-end encrypted snippet storage. ShellSense's Vault uses **PBKDF2-HMAC-SHA256 key derivation + Fernet (AES-128-CBC)** encryption. Even the database (Firestore) stores only ciphertext -- the master password never leaves your device.

3. Remote Web Dashboard with Cloud Persistence

Users can manage all their snippets, shortcuts, and commands from anywhere via a deployed web dashboard. All changes sync instantly to Firestore and are reflected across all desktop installations. No other free, open-source Windows launcher has this architecture.

4. [robot] AI Code Agent Built Into the Dashboard

An integrated AI chat panel (powered by Groq + Qwen3 LLM) can directly modify the application's own configuration and frontend files on command. This is a **self-modifying application** with an embedded AI assistant.

5. [window] Premium Glassmorphism UI on Windows

ShellSense brings the frosted-glass, blur-behind aesthetics of macOS to Windows, with smooth animations, transparent layering, and a pixel-perfect dark-mode interface. This is a premium UI experience not found in any free Windows tool of this type.

6. [web] Natural Language, No Syntax to Learn

Every command is parsed using natural language. There are no arcane flags or syntax rules. Type the way you think: "second email password", "open last download", "timer 10 mins to check oven" -- it just works.

7. Intelligent Snippet Matching with Synonym Expansion

The snippet engine understands semantic synonyms: second = secondary, first = primary, pass = password. It also guards against unsafe lookups -- if you ask for a "password", it will never accidentally return a plain email address.

5. Complete Feature Catalogue

5.1 [search] Natural Language Command Palette

Capability	Description
Global Hotkey	Ctrl + Shift + Space -- summons/dismisses from anywhere
System Tray Integration	Runs silently in background; accessible via tray icon
Double-Enter Flow	First Enter: evaluates & shows result. Second Enter: copies & closes
Escape Flow	Escape immediately dismisses without copying
Result Action Widget	Persistent Copy & Close / Close buttons
Auto-sizing	Widget resizes dynamically based on result content

5.2 [calc] Instant Mathematical Calculations

Example Query	Output
15% of 240	36
sqrt(144)	12
2 ^ 10	1024
sin(pi/2)	1.0
(45 + 32) * 1.8	138.6

Custom-built expression translator using sandboxed eval() with a controlled math dictionary -- no arbitrary code execution.

5.3 [ruler] Interactive Unit Conversion Panels

Category	Units
Length	m, km, cm, mm, mile, yard, foot, inch
Mass / Weight	g, kg, lb, oz, ton
Volume	l, ml, gal, qt, pt, cup, fl_oz
Speed	m/s, km/h, mph, knot
Temperature	Celsius, Fahrenheit, Kelvin
Pressure	pa, kpa, bar, psi, atm
Area	sq_m, sq_km, sq_ft, sq_yard, sq_mile, acre, hectare
Power	W, kW, hp
Number Systems	Decimal, Hexadecimal, Binary, Octal

Inline Examples: 10 miles to km, 72 fahrenheit to celsius, 500 mb to gb

5.4 [fx] Real-Time Currency Exchange

Live exchange rates fetched asynchronously; falls back to cached static rates if offline.

Supported Currencies: USD, EUR, GBP, INR, JPY, CAD, AUD, CNY, SGD, CHF, AED, SAR

5.5 [web] Timezone Translation

Example Query	Output
10:30 am est to ist	9:00 PM IST
3:00 pm pst to gmt	11:00 PM GMT

Supported Zones: UTC, GMT, EST, EDT, PST, PDT, MST, MDT, CST, CDT, IST, BST, CET, CEST, JST, AEST

5.6 [globe] Natural Language Translation

Translate text between 10 languages (English, Tamil, Hindi, Spanish, French, German, Italian, Portuguese, Japanese, Chinese) without leaving the keyboard.

5.7 [scissors] Smart Text Snippets

Store and instantly recall any frequently used text -- emails, addresses, links, phone numbers, standard messages.

Matching Modes:

1. Exact normalized match -- strips spaces/underscores and compares directly
2. Substring match -- partial key matching for convenience
3. Fuzzy match -- handles typos at >=70% similarity threshold
4. Synonym expansion -- second -> secondary, first -> primary, pass -> password
5. Password guard -- queries with password, pwd, secret, pin exclusively route to encrypted snippets

5.8 [lock] Encrypted Personal Vault

Encryption Specification:

- Key Derivation: PBKDF2-HMAC-SHA256, 100,000 iterations, per-snippet 16-byte random salt
- Cipher: Fernet (AES-128-CBC + HMAC-SHA256)
- Storage Format: ENC:<base64_salt>:<ciphertext>
- Zero Knowledge: Master password never transmitted; decryption is entirely on-device

Desktop Flow:

1. User types: "second email password"
2. ShellSense detects the value is encrypted
3. A styled [lock] Master Password dialog appears over the palette
4. On correct password -> decrypted value is copied to clipboard silently
5. On wrong password -> access denied, nothing copied

Web Dashboard Flow:

- Encrypted snippets shown as [lock] Locked with a dashed purple border (read-only, immutable)
- Click [lock] Locked -> enter Master Password to decrypt in-place for editing
- Click [unlock] Protect on any plain snippet to encrypt it with your Master Password

5.9 [folder] File Shortcuts & Deep Links

Query	Action
open resume	Opens resume.pdf in default app
copy file photo	Copies the actual image file to clipboard (pasteable into emails)
copy path project	Copies the full file path as text

Uses low-level Windows CF_HDROP clipboard format via win32clipboard and kernel32 memory APIs -- files can be directly pasted (Ctrl+V) into email clients and File Explorer.

Query	Action
open last download	Opens the newest file in the Downloads folder
copy last download	Copies the file to clipboard

5.11 [timer] Background Timers & Alarms

Run silently in the background; trigger native Windows system dialogs.

Examples:

- timer 5 mins to check oven
- set a timer for 30 minutes to eat
- remind me to drink water in 10 minutes
- stop timer / cancel timer overen

Features: Multiple simultaneous timers, snooze option in popup, state persisted to disk.

5.12 [gear] System Tuner & Cleanup

Query	Action
show startup apps	Lists all startup registry entries and startup folder items
disable Spotify from startup	Removes entry from Windows Run registry
clean temp files	Deletes temporary files from %TEMP% and Windows Temp

Audits: HKCU Registry, HKLM Registry, User Startup Folder, Common Startup Folder.

5.13 [robot] AI Code Agent (Web Dashboard)

Type a natural language instruction (e.g., `""Change the primary color to purple""`) and the agent:

1. Reads current state of snippets.json, shortcuts.json, and commands.json
2. Sends instruction + context to Groq (Qwen3 LLM)
3. Receives a structured JSON diff of the target file
4. Writes changes directly to the file on the server
5. Returns a success/failure status

This enables [zero-code configuration updates](#) for non-technical users.

5.14 [web] Remote Web Configuration Dashboard

Section	Capabilities
Snippets	Add / Edit / Delete text snippets; Encrypt with vault
Shortcuts	Add / Edit / Delete file shortcut bindings
Commands	Manage ML-intent-to-OS-command mappings
AI Chat	Chat with the embedded AI code agent

Features: Resizable sidebar panels, per-row save buttons, toast notifications, real-time Firebase sync, streaming AI responses.

6. Technical Architecture

7. Technology Stack

Desktop Application

Component	Technology	Purpose
UI Framework	PyQt6	Frameless glassmorphism window, system tray
Global Hotkey	keyboard library	Ctrl+Shift+Space hotkey capture
Clipboard Control	win32clipboard, ctypes	Native Windows clipboard operations
Registry Access	winreg	Startup app auditing and management
Async Timers	QTimer (Qt)	Non-blocking background timers
Packaging	PyInstaller	Standalone .exe distribution

ML & AI

Component	Technology	Purpose
Intent Classifier	scikit-learn (MLP + TF-IDF)	On-device NLP intent routing
Model Storage	joblib	Efficient ML model serialization
LLM API	Groq API (Qwen3.8-27B)	AI Code Agent intelligence
Training Data	50,000+ labeled intent samples	Custom training corpus

Backend API

Component	Technology	Purpose
Web Framework	FastAPI	RESTful API for web dashboard
Server	Uvicorn (ASGI)	High-performance async HTTP server
CORS	FastAPI CORSMiddleware	Cross-origin request handling

Frontend (Web Dashboard)

Component	Technology	Purpose
Core	Vanilla HTML5, CSS3, JavaScript	No framework overhead
Typography	Google Fonts (Inter)	Premium modern typography
Design	Glassmorphism, CSS variables	Consistent design system

Cloud & Security

Component	Technology	Purpose
Database	Firebase Firestore	Real-time cloud configuration sync
Authentication	Firebase Service Account	Server-side credential authentication
Encryption	cryptography (Fernet)	AES-128-CBC vault encryption
Key Derivation	PBKDF2-HMAC-SHA256	Password-based key generation
Deployment	Render.com	Cloud hosting for web dashboard
Currency API	open.er-api.com	Live exchange rate feed

8. AI & ML Components

8.1 BrainService -- On-Device Intent Classifier

- Vectorizer: TF-IDF with n-gram features
- Classifier: Multi-layer Perceptron (MLP) neural network
- Model Version: shellsense_v3.pkl

Intent Categories: POWER_OFF, RESTART, LOCK_SCREEN, CHECK_RESOURCES, PROCESS_KILL, STORAGE_INFO, SYSTEM_DETAILS, OPEN_CALCULATOR, OPEN_CMD, OPEN_TASK_MANAGER, CHECK_IP, PING_GOOGLE, DNS_LOOKUP, TRACE_ROUTE, QUIT_PROGRAM, NEUTRAL, and more.

Confidence Gating: Queries below 35% confidence are executed with a warning log; above 35% = full execution.

Training Data: 50,000+ labeled command-intent pairs from safe_cmd_commands_dataset.csv and Cleaned_text_intent.csv.

8.2 AI Code Agent

- Provider: Groq (ultra-low latency inference)
- Model: qwen/qwen3.8-27b
- Context: Injects live state of snippets, shortcuts, and commands into system prompt
- Output: Structured JSON {file_path, content} enforced via response_format
- Safety: Controlled temperature (0.2), max 800 tokens, abort controller for mid-stream cancellation

9. Security Architecture

9.1 Vault Encryption Pipeline

```
User Password (Master Key)
  |
  v
PBKDF2-HMAC-SHA256 (100,000 iterations)
+ Random 16-byte Salt (per snippet)
  |
  v
Fernet Key (32 bytes, AES-128-CBC)
  |
  v
Fernet.encrypt(plain_text)
  |
  v
Storage: "ENC:<b64_salt>:<ciphertext>"
--> Firebase Firestore
--> Local JSON backup
```

9.2 Security Properties

Property	Implementation
Zero Knowledge	Master password never transmitted, never stored
Per-Snippet Salt	Unique random salt per snippet; rainbow tables useless
Tamper Detection	HMAC in Fernet detects any ciphertext modification
Read-Only Lock	Encrypted fields are readOnly in web UI with dashed lock border
Access Denial	Wrong password returns None; nothing copied, no side effects
Command Injection Prevention	subprocess.Popen(cmd, shell=False) -- no shell expansion
Firestore Access	Service Account auth; client-side credentials never exposed

9.3 Local Fallback

If Firebase is unavailable, the system falls back to local JSON files gracefully. All reads and writes keep local files in sync as a cache and offline backup.

10. Remote Configuration & Cloud Sync

Architecture

```
Local Desktop App
  |
  | reads/writes
  v
Local JSON files <---- Firebase Firestore <---- Web Dashboard
(backup/cache)      (source of truth)      (shellsense.onrender.com)
```

How Sync Works

1. On Desktop Launch: ConfigManager checks for firebase_key.json or FIREBASE_CREDENTIALS env var. If found, syncs all config from Firestore.
2. On Save (Web Dashboard): Changes written simultaneously to Firestore and local disk.
3. On Desktop Read: Always prefers Firestore data; falls back to local JSON if offline.

11. Version History & Evolution

v1 -- Foundation

- Basic command-line intent classification
- Simple OS command execution (shutdown, lock, restart)
- BrainService v1 (shellsense_v1.pkl)

v2 -- Utility Powerhouse

- Timezone translator, real-time currency exchange
- Downloads finder, file shortcuts & text snippets
- Background timers with native Windows alerts
- System tuner (startup auditing, temp file cleanup)
- BrainService v2 (shellsense_v2.pkl)

v3 -- Premium UI & Intelligence

- Glassmorphism frosted-glass redesign (PyQt6)
- Interactive unit conversion panels & dynamic category panels
- Double-Enter / Escape keyboard navigation flow
- Result action widget, natural language translation
- BrainService v3 (shellsense_v3.pkl) -- highest accuracy

v3.1 -- Cloud & AI (Current)

- Firebase Firestore integration (cloud sync)
- Web configuration dashboard (deployed on Render)
- Encrypted personal vault (PBKDF2 + Fernet)
- AI Code Agent (Groq + Qwen3)
- Synonym-aware, password-guarded snippet matching

12. Market Analysis & Scope

Global Addressable Market

Segment	Size	Relevance
Windows PC Users	1.6 billion	Primary platform
Knowledge Workers	1.25 billion	Core power user segment
Remote/Hybrid Workers	900 million+	High TZ/currency need
Developers & Power Users	35 million	Advanced feature adopters
Students (Technical)	250 million	Calculation, snippet use

Market Gap

The Windows launcher market is dominated by tools that are too complex (PowerToys), too file-search-focused (Listary), too plugin-heavy (Flow Launcher), or too niche (Keypirinha). **None** offer the combination of natural language, on-device ML, an encrypted vault, and a cloud-synced web dashboard -- all for free.

Growth Drivers

1. Remote Work Explosion -- Timezone/currency needs are now universal

- 2. AI Tool Fatigue -- Users want integrated AI, not yet another app
- 3. Privacy Awareness -- Demand for on-device credential management
- 4. Windows Renaissance -- Copilot raises expectations for intelligent Windows tools
- 5. Keyboard-First Culture -- Developer community increasingly prefers keyboard-driven workflows

13. Competitive Analysis

Feature	ShellSense	PowerToys	Raycast (macOS)	Flow Launcher
Platform	Windows	Windows	macOS only	Windows
Natural Language Input	[OK] Full NLP	[!] Limited	[OK] Yes	[X] Keyword only
On-Device ML	[OK] Custom MLP	[X] No	[X] No	[X] No
Encrypted Vault	[OK] AES-128	[X] No	[!] Pro (\$8/mo)	[X] No
Cloud Config Sync	[OK] Firebase	[X] No	[OK] Pro only	[X] No
Web Dashboard	[OK] Yes	[X] No	[X] No	[X] No
AI Code Agent	[OK] Groq LLM	[X] No	[X] No	[X] No
Glassmorphism UI	[OK] Premium	[!] Basic	[OK] Yes	[X] No
Currency (Live)	[OK] Yes	[X] No	[OK] Plugin	[!] Plugin
File Copy to Clipboard	[OK] Native API	[X] No	[!] Limited	[X] No
Free & Open Source	[OK] MIT	[OK] MIT	[X] Freemium	[OK] MIT

14. Target Audience

- [pc] Developers & Engineers**
Instant math/hex conversions, encrypted API key storage, file shortcut bindings to deep project directories, system command shortcuts.
- [chart] Business Professionals & Analysts**
Currency conversions, timezone translation for global coordination, snippet access for templates, background timers for meetings.
- [grad] Students & Researchers**
Calculation and unit conversion without browser interruption, Pomodoro timers, quick link/document access.
- [lock] Security-Conscious Users**
Zero-knowledge credential storage, on-device decryption, no reliance on browser-saved passwords.

15. Business Model

- Current Stage: Open Source (MIT)**
Community-building, user feedback, and portfolio demonstration.
- Proposed Freemium Tiers**

Tier	Price	Features
Free	\$0	All core features, local storage, 10 snippets
Personal	\$4.99/mo	Unlimited snippets, cloud sync, vault
Pro	\$9.99/mo	All Personal + AI Code Agent, multi-device sync
Team	\$8/user/mo	Shared snippet libraries, team vault, admin dashboard

Alternative Paths

- White-label licensing to enterprise IT tooling vendors
- One-time Lifetime Pro purchase at \$49-\$79

16. Future Roadmap

Near-Term (3-6 months)

- [] Cross-platform support (macOS, Linux)
- [] Plugin/extension system for community-contributed parsers
- [] Snippet tagging and search
- [] Voice input via Windows Speech API
- [] Team shared snippet libraries with RBAC

Mid-Term (6-12 months)

- [] Smart calendar integration (auto-convert meeting TZs)
- [] Browser extension companion (pre-fill snippets in web forms)
- [] VS Code / JetBrains IDE extension
- [] Self-learning snippet suggestion from clipboard history
- [] Windows Copilot integration

Long-Term (12-24 months)

- [] Mobile companion app (iOS/Android) for vault access
- [] Federated vault with hardware key (YubiKey) support
- [] Enterprise SSO (SAML) integration
- [] AI-powered snippet suggestion engine
- [] Marketplace for shareable command/snippet packs

17. Impact & Value Metrics

Time Savings Per Task

Task	Traditional Method	ShellSense	Savings
Unit conversion	45 sec (browser)	3 sec	42 sec
Timezone translation	60 sec (app/web)	4 sec	56 sec
Copy email address	15 sec (type/navigate)	2 sec	13 sec
Access last download	30 sec (File Explorer)	3 sec	27 sec
Set a timer	20 sec (phone)	4 sec	16 sec
Kill a process	25 sec (Task Manager)	5 sec	20 sec

Conservative estimate: 15 micro-tasks/day x 25 seconds saved = 375 seconds = ~6 minutes per day

Per year per user: ~36 hours saved

Qualitative Benefits

- Reduced context-switching -> deeper focus -> higher quality output
- Encrypted vault -> fewer security incidents from weak password practices
- Remote dashboard -> faster team onboarding, no local config files needed

18. Conclusion

ShellSense is not merely a productivity tool -- it is a statement about what the Windows computing experience should be. In an ecosystem where power users have been left behind, ShellSense bridges the gap between macOS-grade launcher elegance and the deep Windows system integration that power users need.

Its combination of:

- On-device ML intelligence (no subscription needed for core features)
- Zero-knowledge encrypted vault (credential security without a dedicated password manager)
- Remote cloud configuration (manage from anywhere, any device)
- Embedded AI coding agent (self-modifiable, adaptive system)
- Premium glassmorphism aesthetics (feels expensive, is free)

...positions ShellSense as a genuinely novel product in a mature market that hasn't seen meaningful innovation in years.

For competitions and pitching: ShellSense demonstrates mastery of ML model training, natural language processing, desktop UI engineering, cloud architecture, cryptographic security, and LLM integration -- all unified in a single, cohesive, immediately useful product that solves real daily frustrations for over a billion Windows users.

Appendix: Quick Reference

Global Hotkeys

Ctrl + Shift + Space -> Toggle palette

Enter (empty bar) -> Copy last result & close

Escape -> Close without copying

Sample Commands

```
# Math
15% of 80
sqrt(144) + 2^8

# Conversions
100 usd to inr
72 fahrenheit to celsius
10 miles to km

# Snippets & Vault
copy my email
second email password    <- triggers [lock] Master Password prompt

# Files
open last download
copy file resume
open project

# Timers
timer 5 mins to check oven
remind me to drink water in 20 minutes
stop timer

# System
show startup apps
disable Spotify from startup
clean temp files
lock screen
```
